**The PRO EDGE** snow rake features a narrow squeegee-like edge around the entire head to contour to the vehicle's surface. A tight "V" edge design slices through deep or wet snow to get down to the surface of the vehicle. Quickly clear tight spots around the grill, wipers, and bumpers.

The square corners of the **PRO EDGE** enable you to clear areas that other snow rakes can't reach. It allows you to be both thorough and fast when cleaning off vehicles. Push or pull even heavy wet snow from the roofs of full sized trucks, mini-vans, and automobiles.

The molded head is made of dense closed cell, a cross link polyethylene foam that endures hundreds of vehicle cleanings. The **PRO EDGE** is approved for use on "Class A" finishes and received the highest ratings possible from an independent testing lab for non-abrasiveness, freeze resistance and durability.

The vinyl coated, rolled steel handle features metal threads for dependable performance. The vinyl provides an extra level of protection against scrapes or damage... as workers quickly clear vehicles.

Head size = 6.5" x 17.5"  
Handle length = 48", standard acme threads
